

Ex : 4**Executing Qualitative Risk Assessments****Date: 28.07.2026****Aim:**

To create and perform a qualitative risk assessment in the Eramba dashboard by identifying a business risk, evaluating its likelihood and impact, and determining its risk level.

Procedure :**Step 1: Open Eramba**

1. Start Docker Desktop and make sure the Eramba containers are running.
2. Open your browser.
3. Go to:
<https://localhost:8443>
4. Log in using your Eramba administrator account.

Step 2: Open Risk Management

1. From the left-side menu, select Risk Management.
2. Select Business Risks.
3. Click Add / Create New Risk.

Step 3: Enter Risk Details

Example risk:

Field	Example
Risk Name	Unauthorized Access to Company Data
Risk Description	Unauthorized users may gain access to confidential company information.
Business Unit	IT Department
Risk Owner	IT Manager
Risk Type	Business Risk
Status	Open

Step 4: Define the Risk

Enter the risk description, for example:

Unauthorized access to company systems may result in data leakage, financial loss, and reputational damage.

Select the appropriate Business Unit, Asset, or other available organizational information.

Step 5: Perform Qualitative Assessment

In the risk assessment section, select qualitative ratings.

Example:

- Likelihood: High
- Impact: High
- Risk Level: High/Critical, depending on your configured risk matrix

Qualitative assessment generally evaluates risk using categories such as:

Likelihood: Low → Medium → High

Impact: Low → Medium → High

The system uses these values to determine the overall risk rating according to the configured risk matrix.

Step 6: Add Risk Treatment

Specify how the organization will handle the risk.

Example:

- Treatment: Mitigate
- Treatment Action: Implement multi-factor authentication and strengthen access controls.
- Responsible Person: IT Manager
- Target Date: 30.09.2026

Step 7: Save the Risk

1. Review all entered information.
2. Click Save / Submit.
3. The risk should now appear under Risk Management → Business Risks.

Open the created risk and verify that the qualitative assessment shows:

Assessment	Rating
Likelihood	High
Impact	High
Overall Risk	High/Critical
Treatment	Mitigate
Status	Open

Output:

Import

The screenshot shows the 'Add Item' form for Business Units in the Eramba dashboard. The left sidebar contains navigation links: Program, Organization, Business Units (selected), Liabilities, Third Parties, and Asset Management. A notification banner at the bottom of the sidebar reads: 'You are running Eramba Community. Upgrade to Enterprise and reach the stars. Check it out'. The main content area is titled 'Business Units' and includes a 'Views' button and a '+' icon. The right-hand 'Add Item' form is titled 'Business Units' and contains the following fields: 'Name' (Healthcare Services), 'Description' (Business unit responsible for healthcare information and systems.), 'Business Unit Contact' (Admin Admin), and 'Potential Liabilities'. At the bottom of the form are 'Cancel' and 'Save' buttons.

The screenshot shows the 'Add Item' form for Assets in the Eramba dashboard. The left sidebar contains navigation links: Organization, Asset Management (selected), Assets (selected), Data Flows, Control Catalog, Risk Management, Compliance Manage..., Security Operations, and Settings. A notification banner at the bottom of the sidebar reads: 'You are running Eramba Community. Upgrade to Enterprise and reach the stars. Check it out'. The main content area is titled 'Assets' and includes a 'Views' button and a '+' icon. The right-hand 'Add Item' form is titled 'Assets' and contains the following fields: 'Related Business Units' (Healthcare Services), 'Name' (Healthcare Patient Database), 'Description' (Database containing sensitive patient healthcare information.), 'GRC Contact' (Admin Admin), 'Asset Reviewer Contact' (Admin Admin), and 'Type' (People). At the bottom of the form are 'Cancel' and 'Save' buttons.

Result:

A qualitative risk was successfully created and assessed in the Eramba dashboard by evaluating its likelihood and impact, determining the overall risk level, and defining an appropriate risk treatment.
